31337	elite	

Web checks

Test	Flagged	Note
sql_injection_error	no	No SQL error string on GET ?id=. Blind SQLi would not show here.
reflected_xss	no	Payload not echoed on GET ?q=.
security_headers	yes	Missing headers are hygiene, not a guaranteed exploit.

This is a lab tool: TCP connect scan, banner grab, a few GET tests, TLS peek. It is not a penetration test and it does not query a CVE database.
